The New Global Challenges in Cyber Security

30th of October – 31st of October 2017
Bucharest, National Library of Romania
- VIIth Edition –
#certcon7
The Romanian Computer Incident Response Team (CERT-RO) is pleased to announce the VIIth edition of the Annual International Conference „The New Global Challenges in Cyber Security” that will take place between 30th of October – 1st of November 2017 in Bucharest, Romania.

This year’s conference aims to provide a mix of debates, presentations and workshops that address technical and policy issues related to Cyber Security in Romania, Europe and beyond. We aim to bring together 200+ cyber experts, government officials and policy-makers, as well as representatives of private companies from across all sectors and industries, NGOs and Academia.

In the context of ongoing efforts to transpose and implement the NIS Directive and the EU General Data Protection Regulation, as well as with a view to address other regulatory and policy challenges, the first day of the event will be dedicated to presentations from EU and Government officials and policy debates in parallel meeting rooms. This will provide an opportunity to share ideas and best practices with other Member States and various stakeholders. Moreover, there will be parallel tracks dedicated to solutions and technologies for operators of essential services in the banking and energy sectors.

The last day is dedicated to plenary sessions and parallel tracks, where leading experts (from the public and private sector), industry leaders and representatives of CERTs worldwide will present the latest challenges to cyber security, future trends as well as updates on the industry overall.

The day after the event will be dedicated to a closed-door session of presentations and exchange of best practices between CERT/CSIRTs. Among other topics, we aim to facilitate a discussion on challenges and capabilities at regional level.

CERT-RO is the National CERT of Romania, established as an independent structure for research, development and expertise in the field of cyber security. We are a specialized organization responsible for preventing, analyzing, identifying and reacting to cyber incidents. CERT-RO is the national contact point for similar structures and is responsible for drafting public policies for preventing and countering the incidents that occur within national cyber infrastructures. We also collaborate with the private sector, the government and academia in increasing cyber security awareness and developing the cyber security culture in the Romanian society. To this end, we organize an annual international conference dedicated to the latest cyber security challenges, solutions and technologies.

Entrance to the event is free of charge.
DRAFT AGENDA
